BRIAN KIPCHIRCHIR

Full-Stack Developer
Nairobi, Kenya | +254 717 320 304 | kipchirchir.lb@gmail.com
github.com/Briankipchirchir77 | LinkedIn | Portfolio Website

PROFESSIONAL SUMMARY

Full-stack developer and Moringa School Software Engineering graduate (JavaScript, React, Python, Flask, PostgreSQL) who has built and deployed five full-stack applications: three solo projects, including a civic-tech platform for Kenyan citizens, and two team projects led as Scrum Master. Former special needs educator who brings an accessibility-first mindset, clear communication and structured problem-solving to every build. Seeking a developer role with a regional employer or startup.

TECHNICAL SKILLS

Languages: JavaScript, Python, HTML, CSS, SQL
Frameworks & Libraries: React, Vite, Flask, SQLAlchemy
Backend & Data: REST API design, JWT authentication, PostgreSQL, database backup and restore
Tools & Deployment: Git, GitHub, Render, Vercel, Neon, Stata (statistical analysis)
Practices: Agile/Scrum, team leadership, Git collaboration (branches, pull requests, merge-conflict resolution), responsive design, technical documentation
Additional Strengths: Accessibility-first design, graphic design, Kenyan Sign Language, differentiated instruction, EdTech integration

PROJECTS

Fahamu – Civic-Awareness Platform

JavaScript, Flask, PostgreSQL | Vercel + Render

A civic-awareness platform that gives Kenyan citizens one centralised place to track scheduled power outages, water supply interruptions and KRA tax filing deadlines.

- Built and shipped the application end-to-end: a vanilla JavaScript frontend served by a Flask backend, with a PostgreSQL database hosted on Neon, deployed live with the frontend on Vercel and the API on Render.
- Designed the data model and REST API for three types of civic information (power outages, water interruptions, KRA deadlines), with user subscriptions and an admin moderation workflow for submitted updates.
- Targeted a problem that affects households and small businesses daily, and set up verified database backups for production data.

Ukoo – Family Connection & Family Tree Platform

React, Flask, PostgreSQL | Vercel

An invite-only platform that helps extended families reconnect. Ukoo (Swahili for clan or lineage) lets people create or join their family, explore their family tree, and share everyday moments, voice notes and stories, addressing the growing distance between relatives and extended family.

- Built the full stack with React, a Flask REST API and PostgreSQL, including sign-in, invite-code joining, and flows to start a new family or request an invite.
- Designed the product around family trees and shared family stories, with a warm, culturally rooted interface.

Me Too – Interest-Based Social Platform

React, Flask, PostgreSQL | Vercel + Render

A social platform that connects people through shared passions and hobbies instead of swipe-style matching.

- Built a React (Vite) frontend and a Flask REST API with JWT-based signup and login, member discovery, search, friend requests and messaging.
- Designed interest-based matching so profiles surface through shared interests and location, prioritising meaningful, lasting connections.
- Deployed the frontend on Vercel and the API with a PostgreSQL database on Render, configuring CORS, environment variables and email-verification flow.

TEAM PROJECTS & LEADERSHIP

CareerCompass – Career Guidance Platform React, Flask, PostgreSQL | Team Lead & Scrum Master

A platform that helps students find career paths that genuinely match their skills and personality, then gives them a personalised, step-by-step roadmap of resources to pursue that path: a plan, not just a quiz result. Conceived from hands-on experience supporting learners as a teacher.

- Led a four-person team as Scrum Master through a 3-week sprint and shipped the MVP on schedule: the frontend took week 1, the backend week 2, and the final week went to integration, testing and bug fixing before the app went live on Render and Vercel.
- Wrote the backlog as user stories, such as "As a student, I want a step-by-step roadmap so that I know what to learn next", and split each one into tasks tracked on a GitHub Projects board.
- Delegated work across the team through a multi-branch pull-request workflow and resolved large merge conflicts across team branches.
- Built a React (Vite) frontend and a Flask + SQLAlchemy REST API on PostgreSQL, with JWT authentication and protected routes; supports Kenyan CBC, Cambridge/IGCSE and A Level results.

MoringaDesk – Peer Q&A Platform React, Flask, PostgreSQL | Team Lead & Scrum Master

A Stack Overflow–style Q&A platform for a Moringa School cohort, where students post technical problems and get answers from peers and technical mentors.

- Planned delivery around a 3-week cycle as Scrum Master: the interface came together first, then the API and database, leaving the last week for connecting the two, testing and fixing bugs. The MVP went live on schedule.
- Framed features as user stories, such as "As a student, I want to vote on answers so that the most helpful ones rise to the top", and used them to coordinate tasks, code reviews and delivery across the team.
- Built a React frontend backed by its own Flask + PostgreSQL REST API, with answers, voting, question following and a shared FAQ.

EDUCATION

Software Engineering Program – Moringa School, Nairobi Feb 2026 – Aug 2026
Completed | HTML, JavaScript, React, Python, Flask, SQLAlchemy

Bachelor of Special Needs in Education – Mount Kenya University, Thika May 2017 – Mar 2020
Second Class Upper Division

Certificate in Kenya Sign Language – Kenya Institute of Special Education Feb 2022 – Jul 2022
Credit

PROFESSIONAL EXPERIENCE

Freelance Graphic Designer – Self-employed Oct 2025 – Jan 2026

- Delivered freelance graphic design projects for clients, turning briefs into polished visual work through deliberate layout, typography and colour choices.
- Managed the full client cycle independently: clarifying requirements, meeting deadlines and iterating on feedback until the result matched what the client needed.
- Sharpened a user-focused design eye (visual hierarchy, consistency) that now shapes the React interfaces I build.

Learning Support Teacher, Grades 4–6 – Light International School, Nairobi Nov 2024 – Aug 2025

- Designed and tracked individualised learning plans, using data to measure each learner's progress and adjust the approach.
- Integrated educational technology and differentiated instruction, using Kenyan Sign Language where needed, to make learning accessible to diverse learners.
- Collaborated with teachers, parents and specialists to adapt strategies in real time, and presented clear, structured progress reports.

Special Needs Agent – County Government of Bomet Jan 2024 – Oct 2024

- Gathered and organised field data through assessments and outreach to build accurate eligibility records.
- Coordinated across government officials, community leaders and caregivers to deliver services to families.

Homeschool Tutor (British Curriculum, KS2–KS3) – Private, Nairobi Feb 2023 – Dec 2023

- Delivered personalised instruction, adapting teaching methods to each learner's style.
